

Communication Through Two Dimensions

Project:

As architects we are expected to understand and talk about three dimensional space using two dimensional techniques. Your task is to take the spaces you have been envisioning through model making and draw them in plan and section.

Instructions:

Draw sketches of what you think your plan and section will look like. Once you have a good idea, talk to your TA to get feedback. Once your TA gives you their approval, you will be given nicer paper for drawing the final versions of your plan and section.

When you are drawing plans and sections, you are not just documenting your building but also how your spaces will be used. Consider who would use the space, what they might be doing, and what spatial needs they might have (lighting, furniture, room size, etc.).

Deliverable(s):

A clean copy of your plan on a 12" x 18" sheet (landscape).
A clean copy of your section on a 12" x 18" sheet (landscape).
